

Interview skills.

1. Tell me your strength & weakness.
2. Give an instance where you faced a problem & overcome it.
3. How do you deal with criticism.

Answers:

1. Strengths: Skills like Nextjs, Web development related skills, AI driven optimization, ~~Comp~~ Leadership Skills, Consistency.

Weakness: Competitiveness: I am a very competitive individual but I have overcome it as being a team player.

2. I recently faced a problem with the ~~the~~ deployment of one of my projects. I was ~~working with~~ ^{using} vercel for deployment from about 2 years but its drawback would be that we can't deploy a forked website. I sorted the issue by reconfiguring my project with the help of the documentation. The problem was simple, installation of the packages related to vercel analytics and speed insights, but this did make me wonder, even the massive sites have their competitions & their own terms.

3. I deal with criticism in my own way where I first categorize them & divide as Positive or Negative. If the criticism is Positive, I would definitely look into the issue & try to improve the suggested changes. If the criticism is Negative, I with smile would admire the feedback & work on it. I think criticism is very important and I take it something as a ~~reality~~ reality check.
